

Cleaning Instructions

Daily

1. Remove the **drip tray** and **dreg drawer** and rinse both under **cold** running water. (Machine will also indicate when dreg drawer is full)
2. With drip tray and dreg drawer removed, wipe away any coffee grinds left behind on the machine.
3. If you use the auto frother, at the end of each day place the tube into a cup of cold water. Place another cup under the frother and press the milk frother button (top right button on menu pad). Run for 10 – 15 seconds. Press milk frother button again to stop the frother.

Weekly

Auto frother: If you use the auto frother, we recommend removing and dismantling it, then washing all parts (including the clear tubing) in **hot soapy** water. Rinse well before re-assembling.

Brew Unit: It is **very important** that this is cleaned at least once a week. Failure to do so will not only affect the quality of your coffee, but will allow mould to grow in hot, humid conditions, and can lead to machine failure. To clean the brew unit, follow these simple steps:

1. Remove drip tray and dreg drawer.

2. Open the door on the right side of the machine (**10**).
3. Remove brew unit out by pressing down on the handle and pulling it out (**9**).
4. Rinse the entire brew unit under **cold** running water. Dry the top part of the brew unit with paper towel before re-inserting. If the tray under brew unit has coffee grinds or liquid the tray should be removed, and all deposits wiped away before re-inserting into position.
5. To re-insert the brew unit, ensure that the bottom of the unit slides along the tray on the bottom of the machine and that it clicks into place when fully inserted. The brew unit does not need to be forced and should slide in easily.
6. Close the door and return the dreg drawer and drip tray.

Please call 0423 980 500 if you have any problems setting up or using the coffee machine.
